EDUCATION

- Monash University Malaysia (June 2024 - Present)
 - Bachelor of Software Engineering
 - Expected graduation: May 2028
 - Current CGPA: 3.51/4.00
- Sunway University (June 2023 - June 2024)
 - Monash University Foundation Year (MUFY)
 - CGPA: 4.00/4.00

SKILLS

- AI tools
 - Experiment with the latest tools and techniques
 - Use methods to minimize additional issues caused by using AI
 - Up to date knowledge on the latest AI news
- Linux
 - Use Linux on a daily basis
 - Self-Hosted linux servers
 - Experiment and use OS automation tools
- Scripting/Automation
 - Always eager to use automation to improve working on tedious tasks
 - Created tools for a development team
 - Personal tools
- CI/CD techniques
 - Vercel deployments
 - Github/Gitlab Actions for advanced automation

Languages & tools: TypeScript, JavaScript, React, React Native, Rust, Tauri, Python, FastAPI, PostgreSQL, Express, Convex, Vite, Shadcn, Git, GitHub Actions, GitLab CI, Vercel, Linux, Bash

Familiar with: Java, C, Docker

HOMELAB

- Proxmox host running self-managed services
 - Immich for photo and video storage
 - Navidrome for music streaming

SPOKEN LANGUAGES

- Native English. Conversational Malay and Chinese.

Software Engineering undergraduate at Monash University Malaysia, graduating May 2028. Works across the stack, from Rust and Tauri on the desktop to React and Postgres on the web, and will rewrite something when the first architecture turns out to be wrong. Has led university teams as scrum master and software architect, and did the unglamorous parts too: merge request reviews, repository hygiene, and unblocking teammates. Runs Linux daily, self-hosts a Proxmox server, and builds small tools to kill repetitive work. Seeking a software engineering internship.

EXPERIENCE

- Worked in a university group (of 6 people) using agile and scrum group management techniques, over 3 months
 - built a Learning Management System website
 - Software Stack: Vite+React with a traditional PostgreSQL+express backend.
 - Took on the scrum master role and made sure everyone were on task and helped them if needed.
 - Took on the fullstack developer role
- Worked in a larger scale university group (of 10 people) using SAFe group management technique, over 9 months
 - built a peer tutoring marketplace
 - Software Stack: Vite+React+Shadcn with a Convex unified backend-as-a-service
 - Took on the Software Achitecture role that made major decisions on the tech stack
 - Took on the backend developer role and moved on to a fullstack role
 - Managed the merge requests and general maintainability of the git repo
 - Reviewed the code of each merge requests opened

PERSONAL PROJECTS

- Voloph
 - A desktop app for reviewing home made badminton clips designed to work from most angles
 - Provides a frictionless interface to find and scrub segments of recordings
 - Notation tools to mark and review sections
 - Built using a Tauri+Rust+React stack
- Walltare
 - A desktop app for rating/managing a large collection of Wallpapers in a folder
 - Rate wallpapers using A/B rating techniques that calculates a score
 - Users make a decision based on the score
 - Initially a React+Vite frontend with a python fastAPI backend
 - Moved to a Tauri+Rust+React stack
- Aldex (live)
 - A WebApp for tracking and managing music Albums
 - Offers multiple categories to filter albums
 - Provide an elegant UI
 - Uses an external API to fetch data about albums from an inputted album detail
 - Built using a React+Vite+Convex stack
